

# CSF Election Program

## About us

CSF is the Christian Student Party. This year we have 2 seats in the Student Council of Wageningen University (WU). As CSF we strive for an even better university for all. Our vision is based on Christian values where diversity is highly treasured. Having our core values anchored on integrity, integration, responsibility, equity and sustainability, we represent students from diverse beliefs and backgrounds. With regard to education we strive for high quality education that has an impact on students and the world around us. CSF is a party with clear Christian roots, we are happy our Christian vision has a clear voice in the Student Council but we will of course also be the voice of non-Christian students. For CSF it is important that the vision and core values are a long term guide for its members so our supporters know what we stand for and what they can expect from us.

## Our Vision

The university should be a forum where people with different visions and backgrounds meet each other and students can develop themselves as academics and persons.

## Our Core values

Responsibility

Integrity

Equity

Integration

Sustainability

### Sustainable education.

We are a university that aims to find solutions to the major problems the world is facing today. This makes it relevant to innovate learning paths at WUR with the sustainability learning framework. In this way, students are trained to be not only experts in their fields of study, but also as responsible citizens, ready to provide sustainable solutions to the changes and transitions the world is facing in diverse ways. As CSF we find it important that the education we invest our resources in, in the form of time, money and even our talents, should equip us with knowledge and skills to help us adapt to the realities of the changing world.

### Real integration.

To benefit from the internationalisation, good integration is key. As CSF we have noticed some changes towards making integration at WU practical and real. However, we think we can still get more out of the different cultures that coexist in our University. Therefore, Our aim is to support the move towards real integration where, when the word internationalisation is mentioned all students feel a part of it. Both Dutch and non-Dutch, Europeans and non-Europeans and also those who studied at WUR and those from other universities. To make this concrete, good policy measures should be in place.

### Sustainable strategy.

The university is really trying to be a sustainable university, but if we want to be sustainable on the longer term we should really decrease the number of flights. It is understandable that we are an international research centre and we need to be abroad, but we need to look into possibilities to strongly decrease the amount of flights per year.
